Grow Your Toolbox Today!

Ever think it would nice to...

- Automate the processes of importing files into Excel?
- Automate the importing of data from the internet for processing?
- Automate the generation of scheduled reports?
- Control user input to reduce errors?
- Automate the population of forms?
- Automate reformatting of data streams for importing into databases, statistical packages, CAD systems or other software products?
- Automate sending of emails from an Excel spreadsheet?
- Add new functionality?

Let Me Help You Grow Your Toolbox!

AT VAN WHY DESIGN

I provide advanced programming services for users of MS Excel.

Excel is an extremely powerful program and most of us are using it as a critical component of our business activities. We use it to track information, generate reports, compile/visualize data or maybe some other business critical function.

It is very often the case time can be saved by automating processes of data gathering. User entry could be validated to check for errors or that entry is complete. Time can be saved by automating scheduled reporting activities. Processes of data compiling for use in another application can be automated. Overly complicated formulas can be simplified or functions not available in Excel can be created.

EXAMPLES

Automation of weekly text file import: A program was developed to select a folder then import and parse all text files located in the folder. Time savings 2-3 hours a week.

Automation of customer required form population from dimensional results: A program to populate a customer required form from dimensional results extracted from measurement equipment. Time savings 10 minutes per part and elimination of typographical errors.

Generation of email: A program to automatically send emails from a spreadsheet. Time savings 15 hours a month.

Graphical result generation: A program to generate graphical results of dimensional inspection data. Saving 10 minutes per part and providing consistency of results.

Stock info: A program to simultaneously download multiple stock quotes from the internet and pull them into Excel. Saving 1 hour a day and enabled storing of the data for later evaluation.

POSSIBILITIES ARE ENDLESS

Let me help you to get more out of Excel.

Just about anything is possible. Simple tools such as customized functions to full menu driven applications and everything in between. You have nothing to lose, contact me for a free consultation.
